Ofcom-compliant installations

ABOUT ZONEGEN

Great signal, guaranteed.

Modern buildings are designed to be signal killers — thick concrete, glazed facades, basement car parks, underground spaces. Off-the-shelf boosters won't fix it, and many are outright illegal in the UK.

Zonegen is a specialist signal company. Since 2016 we have designed and professionally installed Ofcom-compliant mobile signal boosters across London and the South East — for homes, offices, hospitals, warehouses, hotels, care homes, car parks and everything in between. Elite Partner with Nextivity.

Fully Ofcom-compliant

Every system we install is Ofcom-approved and endorsed by EE, VodafoneThree and O2. No grey-market hardware, no compliance risk, no paperwork for you.

Professionally installed

Accredited engineers survey, design and install your solution from start to finish. Every installation is fully tested and commissioned before handover.

Every UK network, one install

EE, VodafoneThree and O2 — all boosted simultaneously with a single system. No carrier-specific hardware and no exclusions for staff or guests.

UK-based, family-run

Real people answering the phone, with eight years of specialist signal experience. You'll always deal with the same team, from consultation through to aftercare.

HOW WE WORK

A simple, four-step process.

01**Free consultation**

We discuss your building, your signal problems and your networks — by phone or on site. No hard sell.

02**Engineer survey**

An accredited engineer measures existing signal, maps the building and designs the right Cel-Fi system.

03**Professional install**

Our team installs, commissions and tests the system — a day for simple sites, longer for complex buildings.

04**Optional monitoring**

Keep your system watched 24/7 with remote health checks, alerts and a direct line to the install team.

Typical timescales: straightforward residential sites are completed within a day; larger commercial installations are scoped and scheduled at survey.

SECTORS WE SERVE

Signal solutions for every environment.

From corporate offices to care homes, construction sites to data centres — Zonegen delivers Ofcom-approved signal solutions wherever reliable mobile coverage matters.

Offices & Commercial

Full coverage across all floors, meeting rooms and reception areas — keeping hybrid teams and business systems reliably connected.

Home & Small Office

Discreet, compact installations delivering 4G and 5G to every room — including basements, loft conversions and rural properties.

Healthcare

Safe operation alongside sensitive medical equipment. Full coverage in wards, theatres, corridors and car parks with minimal disruption.

Warehouses & Factories

Full coverage in steel-framed and concrete industrial buildings — supporting handheld scanners, tablets and logistics systems.

Hospitality

Seamless coverage for hotels, restaurants and venues — supporting POS, contactless payments and guest satisfaction.

Retail

Reliable signal for contactless payments, mobile EPOS and stockroom handhelds across stores, retail parks and shopping centres.

Education

Campus-wide coverage across lecture theatres, labs, sports halls and accommodation — scheduled around term time.

Car Parks & EV

Reliable signal in underground and multi-storey car parks — supporting EV charging app authentication and emergency calls.

Care Homes

Consistent signal across resident rooms and communal spaces — supporting fall detection, emergency call and family contact.

Construction

Temporary and permanent solutions for active sites. Rapid deployment, scalable as the build progresses.

Data Centres

Signal delivery in shielded, metal-dense environments — compliant with strict RF requirements and facility standards.

IoT & Connected Devices

Reliable cellular for smart buildings, BMS, environmental sensors and asset tracking across large or complex sites.

THE TECHNOLOGY

Cel-Fi by Nextivity — smart signal, done right.

Cel-Fi by Nextivity is the world's most advanced smart signal booster — and the only solution of its kind that is fully Ofcom-compliant for use in the UK. As a Nextivity Elite Partner, Zonegen designs, supplies and installs the complete Cel-Fi range.

Intelligent, network-safe amplification

Powered by Nextivity's Intelliboost® chipset, Cel-Fi actively manages its output to protect the network. It isn't a passive repeater — it is an intelligent system that automatically adjusts to deliver maximum performance without causing interference to adjacent networks.

Up to 4x stronger in-building signal

Unlike outdated analogue boosters, Cel-Fi delivers dramatically improved 4G and 5G coverage even in buildings where signal is typically blocked. CAT 6 cabling and Power over Ethernet mean zero signal loss between components.

Scales from a single home to an entire campus

A compact all-in-one unit for a house. A multi-antenna distributed system for a warehouse, hospital or multi-floor office. We size the solution to your building — never overselling.

What you get with every Zonegen install

- › All major UK networks supported simultaneously — EE, VodafoneThree and O2.
- › 4G LTE and 5G compatible, including the newly merged VodafoneThree network.
- › Ofcom licence-exempt — no spectrum application, no regulatory delay.
- › Designed not to disrupt or interfere with the wider mobile network.
- › Installed and commissioned by accredited Zonegen engineers.

Private Network Solutions

Zonegen also installs Cel-Fi equipment for organisations operating their own private cellular networks — fully within Ofcom's licence-exempt framework, with no spectrum licence required. Common in logistics hubs, airports, hospitals and large campuses where security and guaranteed capacity matter most.

OUR SOLUTIONS

The right system for your building.

Residential & Small Office

Compact, self-contained, discreet — significantly improved signal to every room, including previously dead areas. Typically a single-day install.

Commercial & Enterprise

Engineered for larger buildings — warehouses, hospitals, multi-floor offices. Scalable multi-antenna distribution with full UK network compatibility.

Monitoring & Support

Continuous remote system health monitoring, remote software updates and any changes needed to keep your system at maximum performance.
